Refractory Logs

Gas Logs for Rumford Fireplaces

Traditional Rumford Fireplaces have a wide front, narrow back, shallow depth and a height nearly as tall or taller than its width. They have a unique aerodynamic throat and smoke chamber that create greater efficiency than traditional fireplace designs.

- Fit within the Traditional Rumford Fireplace Dimensions listed to the right
- Model numbers for the Rumford Log Sets are keyed to Traditional Rumford Fireplace Dimensions, not the size of the logs
- These Tipi sets are intended for use with the Tipi/Andiron Burner ("TNA" and "TNA-E" models)
- These sets may be used in fireplaces with more standard tapers and depths, but you may need to step up to the next size and/or add individual logs in order to satisfactorily fill the fireplace opening.

Traditional Rumford Fireplace Dimensions

Fireplace Size	Front Width	Rear Width	Depth	Opening Height	TNA Burner	Rear Width
24	24"	13.5"	12"	24" – 28"	TNA20, TNA20E	9 1/8"

Tipi/Andiron Burner ("T") Factory Assembled Controls

Note: Burners for vented sets produce soot and other combustion products and are for use ONLY in fully functioning fireplaces in which it is safe to burn wood and with the damper wide open. Glass doors must be wide open when burning for proper ventilation, proper combustion and cooling of safety control valves and components.

Farringdon Wood Burning Stove

Our state-of-the-art Flexifuel System provides an unrivalled environment for burning wood. Its unique crucible shaped bars ensure that fuel is constantly fed towards the center of the fire, reducing heat loss and ensuring no logs go unburnt. Meanwhile, its dimpled surface and deep contour helps to build a natural layer of ash, providing a perfect wood burning base and plenty of space for your fuel. Offering ease of use, our Flexigrate riddling system provides simple ash removal whilst bars can be replaced individually for low cost, long-term maintenance.
